The Department of Economics at Stockholm University
– A brief early history

Lectures in Economics at Stockholm University (then Stockholm University College) started in 1888 with Johan Leffler, who had obtained his position as lecturer in competition with Knut Wicksell. In 1904, Gustav Cassel became the first professor of economics. Cassel had originally studied mathematics (he wrote a dissertation on linear algebra) and later turned to economics. He is known for his development of general equilibrium theory, the most interesting aspect perhaps being a model of proportional growth. During the 1920’s, Cassel was one of the most prominent economists in the world, lecturing widely on monetary issues.

Cassel left his chair in 1933 and was succeeded by his pupil Gunnar Myrdal. Myrdal’s dissertation, *Pricing and Change*, introduced intertemporal planning and risk into price theory. Erik Lindahl, at the time lecturing at the department, is mentioned in the preface for his advice. Lindahl’s own development of intertemporal and temporary equilibrium theory in the late 1920’s was, in turn, influenced by Myrdal’s analysis.

In 1921, a second chair was created with Gösta Bagge as its first professor. Bagge’s early work concerned wage-setting under trade unions. As a professor, he played an important role as entrepreneur, channeling money from the Rockefeller Foundation to a grand empirical investigation of wages and national income in Sweden.

During the 1930’s several members of the department were involved in the development of employment theory. Gunnar Myrdal, Gösta Bagge, Alf Johansson and Dag Hammarskjöld contributed to the Unemployment Commission. In the second part of the 1930’s, Erik Lundberg and Ingvar Svennilson defended doctoral dissertations offering important theoretical contributions to the Stockholm School.¹ Lundberg and Svennilson were both to become influential professors in the department.

¹ The name of the school was coined by Bertil Ohlin in two articles in *Economic Journal*, where he argued that the central themes of Keynes’ employment theory had been independently developed by the Swedish economists, most of whom worked in Stockholm.
Erik Lundberg took up a position at Konjunkturinstitutet (the National Institute of Economic Research) in 1937 and became its head in 1946. He returned to the department as professor in 1946, acting as a full-time professor after 1955 when he left Konjunkturinstitutet. Lundberg’s overview of business cycles and stabilization policy from 1953 (*Konjunkturer och ekonomisk politik*, translated into English as *Business Cycles and Economic Policy*, 1957) influenced a generation of students of Keynesian fiscal and monetary policy. The impact of Lundberg’s impressive personality was not less important.

Ingvar Svennilson was head of Industriens Utredningsinstitut (The Research Institute of Industrial Economics) in 1942-51 and became professor at the department in 1947. In parallel with his professorship, he played an important role in the development of Långtidsutredningarna (Medium Term Surveys) of the Swedish government.

The development of the department is described in the book *Från värde till välfärdsteori – nationalekonomin vid Stockholms högskola/Stockholms universitet 1904-2004*, by Svante Nycander together with Jonas Agell, Eskil Wadensjö and Hans Wijkander (SNS Förlag, 2005). The book was presented at a seminar on December 2, 2004, celebrating the 100th anniversary of Gustav Cassel’s appointment as professor.

Two of the department’s alumni have been awarded the Nobel Prize, Gunnar Myrdal (1974) and Bertil Ohlin (1977). One alumnus, Dag Hammarskjöld, served as Secretary-General of the United Nations. Several members of the department have played important roles in Swedish politics: Bertil Ohlin and Gösta Bagge were leaders of political parties, and both Bagge and Ohlin, as well as Karin Kock (acting professor 1938-46) and Gunnar Myrdal, also served as Cabinet Ministers. Kjeld Philip, who was professor at the department in 1949-51, later became Minister of Finance in Denmark. The department’s tradition of educating prominent civil servants, politicians and business leaders, as well as academic teachers and researchers, continues strongly to the present time.
The Department of Economics today

Stockholm University offers one of the best environments in Europe for research and education in economics. The Department of Economics has 14 full professors, 5 associate professors, and 10 assistant professors and post-doctoral researchers. The graduate students, just over 60 in number, have the department or IIES or SOFI as their place of work. Economics at Stockholm University, i.e., the Department of Economics, the Institute for International Economic Studies (IIES) and the Swedish Institute for Social Research (SOFI) together, is ranked no. 19 in Europe and no. 1 in Sweden (no. 55 in the world) in the Tilburg University research ranking of Economics Schools (ranking based on research contribution 2008-2012, see https://econtop.uvt.nl/rankinglist.php). Former students are employed as economists in a wide range of fields, such as national and international organizations, governments, business and finance.

Undergraduate studies

We teach more than 1000 undergraduate students in Economics each semester. Courses are taught by the department’s faculty and by professors and researchers from the IIES, and SOFI. We have bilateral ERASMUS agreements with close to 20 universities in Europe, and also take part in Stockholm University's NORDPLUS and central exchange agreements. Non-European students can apply to studies in the department through the Central Level Bilateral Agreements administrated by the Office for International Student Exchange at Stockholm University.
Advanced level studies

The department offers a two-year Master Programme in Economics. The language of study is English and courses start in late August or early September. The programme provides a solid preparation for a career as a professional economist in government, international organizations or business, and also provides a good starting point for doctoral studies. The focus is on the use of theoretical and empirical methods in the analysis of economic problems. Students take second-cycle courses and a selection of third-cycle courses in economics. During the fourth semester students write a 30 HEC master thesis. After having completed the program the student may apply for a Master’s Degree in Economics or in Econometrics.

Doctoral studies

The PhD program at Stockholm University is organized by the Department of Economics and run in cooperation with the Institute for International Economic Studies (IIES) and the Swedish Institute of Social Research (SOFI). Approximately 10 students are admitted each year to a four-year, full-time program in English starting in the Autumn. The deadline for applications is February 1. The formal requirements are specified on our web page www.ne.su.se.

The first year of the program consists of courses in mathematics, econometrics, microeconomics and macroeconomics. The second year consists of elective courses, and the third and fourth years are devoted to dissertation work. The course program is part of the Stockholm Doctoral Program in Economics, Econometrics and Finance (SDPE), organized jointly with the Stockholm School of Economics.
Research

The research environment in the department can be described in terms of two broad fields, with several additional and partially overlapping research areas. A strong focus is labor economics and public economics, where the department runs one of Stockholm University’s designated leading fields of research, *Evaluation of economic policy measures*. Research in this area considers, for example, how social insurance systems affect health and early retirement, how monetary policy should be designed in a globalized world, and the effect of education policies. Another strong research area is international economics. Within this field we study how industry location is affected by different types of regulations and economic policies, and the effects of monetary and fiscal policy in small open economies. Other lively areas of research are political economy, empirical macroeconomics, law and economics, experimental economics, social norms, network theory, game theory, and financial economics.

Research in the department has a strong international focus. It is communicated in international journals with peer review, and many researchers are members of leading research networks like CEPR, IZA and CESifo. We have a number of research collaborations with prominent economists in the world, and visits by as many as thirty international researchers each year. Members of our faculty have recently had long research visits at top universities like Berkeley and Stanford. The department is host for the prominent journal *Scandinavian Journal of Economics*, and our researchers have assignments as editors and associate editors of scientific journals such as *Regional Science and Urban Economics, Annales d’Economie et de Statistique, Journal of the European Economic Association, Journal of Public Economic Theory, Scandinavian Journal of Economics* and *Journal of Economic Dynamics and Control.*

We present the first system developed for automated grading of high school essays written in Swedish. The system uses standard text quality indicators and is able to compare vocabulary and grammar to large reference corpora of blog posts and newspaper articles. The system is evaluated on a corpus of 1702 essays, each graded independently by the student’s own teacher and also in a blind re-grading process by
another teacher. We show that our system’s performance is fair, given the low agreement between the two human graders, and furthermore show how it could improve efficiency in a practical setting where one seeks to identify incorrectly graded essays.

Mathias Herzing

This report contains the findings of the research program “Efficient Environmental Inspections and Enforcement”. Reflecting the multi-disciplinary nature of this research program, the report covers a wide range of areas, e.g. the interaction between inspector and inspectee, the professional judgments of inspectors, the conditions for municipal inspections and enforcement, the incentives of inspectees to comply with legislation, and the data and information management of authorities.

Current research projects

Pedro Brinca
1. On Cross-Country Wealth Heterogeneity and Fiscal Multipliers

Charlotta Boström
1. The Effect of Decentralized Democratization on the Well-Being of Citizens (with Linnea Wickström Östervall)
The aim is to study the effect of decentralized democratization on infant and child mortality and in a first step use a constitutional reform in India for identification. We will explore whether decentralized democratization reduces the probability of dying as a child, and evaluate some potential mechanisms.
2. Hunger and Decision-Making: Is an Empty Stomach a Bad Advisor? (with Emma von Essen and Linnea Wickström Östervall)
3. Long Term Effects of School Reforms
In the 1990s there was extensive reform of the Swedish schooling system. One of these reforms implied an increase of the graduation hurdle. I look at the consequences of this reform. In particular I examine how the reform affected the graduation rate, cognitive ability, earnings, unemployment, early fertility and health.
4. Discrimination and transient pseudonymity in e-commerce (with Emma von Essen and Jonas Karlsson)
Transient anonymity as well as transient pseudonymity are common features of usernames on eBay. The aim of this study is to investigate how transient pseudonymity affects buyer discrimination in feedback.

Johan Egebark
1. How Did Firms Respond to the Payroll Tax Reduction for Youths? (with Peter Fredriksson and Niklas Kaunitz)
We examine how firms responded to a payroll tax cut for youths. We study the responses along a variety of dimensions: wages and employment for the directly affected groups, profits and investments. The higher the share of the workforce within the right age range, the larger the subsidy. Within tightly defined industries and local labor markets, the age composition (and hence the size of this subsidy) should be as good as randomly assigned.
2. Payroll taxes and self-employment
I estimate the effects of payroll tax reductions on self-employment among youths in Sweden.

Lennart Erixon
1. Nordic Models Today (with e.g. Lars Mjøset, Ådne Cappelen, Juhana Vartrianen and Jørgen Goul Andersen)
The work is conducted by economists and sociologists from the Nordic countries. The research group has made contributions to the literature on economic policy and structural changes in the Nordic countries since the early 1980s. The current phase of the project focuses on changes in the Nordic economies in light of globalisation, EU integration and new economic thinking in the 1990s and 2000s.

2. Is Industrial Renewal Hampered or Encouraged by High Profits? (with Louise Johannesson)
The theory of transformation pressure maintains that productivity growth in the business sector is stimulated by a decline in profits. The aim of the project is to test central hypotheses about firm strategies in this theory and uncover the underlying psychological mechanisms. The conclusions are drawn on the basis of four role plays 2009-2013 in which students in economics, Stockholm University, are acting as managers for an established company.

Jürg Fausch
1. Speculative bubbles, financial crises and welfare effects (with Markus Andersson, SSE)
Recent research has shown under which conditions asset bubbles can exist. We use a DSGE model that incorporates speculative bubbles in asset prices and analyze quantitatively the welfare implications for the economy when these bubbles burst.

2. The Barro-Rietz hypothesis of disaster risk in a New Keynesian model
The asset pricing implications of the New Keynesian model have not been fully studied. Recent research has shown that monetary policy shocks are too weak and short-lived to generate a reasonable equity premium. I incorporate the Barro-Rietz hypothesis of disaster risk into a New Keynesian DSGE model and study its implications on asset prices and other macroeconomic variables.

Rikard Forslid
1. Företagens beteende i en globaliserad värld, klimatpåverkan och mellanhänder (Vetenskapsrådet)
This project examines how the responses of firms to globalization affect the environmental pollution. The project makes uses a micro database on Swedish firms
that contains information about firms’ export and import activity, energy use, emissions, investment in emissions abatement, technology and production. The project also studies the impact of intermediation in international trade.

Peter Fredriksson

1. A matter of class: Why class size is more important for low-income students, manuscript, Department of Economics, Stockholm University. (with Björn Öckert, IFAU and Hessel Oosterbeek, University of Amsterdam)

Studies on the effect of class size on student achievement typically find that disadvantaged students benefit more from reduced class size than others. To better understand this differential impact, we analyze changes in the learning environment due to class size, and behavioral responses to class size of parents, schools, teachers and students.

2. Mismatch of talent? Evidence on match quality, job mobility, and entry wages” (with Lena Hensvik and Oskar Nordström Skans, IFAU)

We examine the direct impact of idiosyncratic match quality on entry wages and job mobility among recent hires. The analysis uses a unique data set containing information on workers’ multidimensional talents, which are matched to job-indicators and individual wages.

3. Long-run Effects of Educational Interventions (with Per Pettersson Lidbom, Björn Öckert, IFAU, Mårten Palme, and Jonas Vlachos)

We examine the long-run effects of various educational interventions. In particular we look at the effects of: extensions of compulsory schooling; class size changes; school starting age; and changes in the tracking age.

4. Skill and Cyclical Unemployment (with Andreas Mueller, Columbia Business School, and Björn Öckert, IFAU)

5. Who are the early leavers? Selection on cognitive and non-cognitive skills prior to mass layoff (with D. Seim, University of Toronto)

6. Are Managers Paid for Luck? (with Lena Hensvik and Oskar Nordström Skans, IFAU)

7. How does a Declining Sequence of UI Replacement Rates Affect the Hazard to Employment? (with Helge Bennmarker, IFAU)

8. The Devil is in the (Institutional) Detail: Sorting and the RD Design in a Public School System. (with Björn Öckert, IFAU, and Hessel Oosterbeek, University of Amsterdam)

9. “Manna from Heaven: How Did Firms Respond to the Payroll Tax Reduction for Youths?” (with Johan Egebark and Niklas Kaunitz)

10. The Supply of Skills to the Teacher Profession. (with Erik Grönqvist, Björn Öckert, IFAU, and Jonas Vlachos)
Mathias Herzing
1. Inspections and Enforcement as Instruments for Enhancing Environmental Behaviour (with Mathias Herzing, Jonas Häckner, Astri Muren, Eric Sjöberg et al).
   This is a multi-disciplinary research program financed by the Swedish Environmental Protection Agency focusing on the incentives of operators to comply with environmental law and to enhance environmental behavior.
2. Efficient Environmental Inspections and Enforcement (with Adam Jacobsson, Jonas Häckner, Astri Muren and Eric Sjöberg).
   This multi-disciplinary research program is financed by the Swedish Environmental Protection Agency (Naturvårdsverket) for three years. It consists of three projects, addressing the methodology, the institutional framework and the measurement of environmental inspections. The central issue is how compliance with environmental legislation can be achieved.
3. Tax incidence under oligopoly (with Jonas Häckner)

Jonas Häckner
1. Tax incidence under oligopoly (with Mathias Herzing)
2. Counterfeiting and consumption externalities - a closer look (with Astri Muren).
3. When do firms break the law in order to reduce marginal cost? - an application to the problem of environmental inspection, (with Mathias Herzing).

Adam Jacobsson
1. Inspections and Enforcement as Instruments for Enhancing Environmental Behaviour (with Mathias Herzing, Jonas Häckner, Astri Muren, Eric Sjöberg et al).
   Multi-disciplinary research program financed by the Swedish Environmental Protection Agency (SEPA) focusing on the incentives of operators to comply with environmental law.
2. Efficient Environmental Inspections and Enforcement (with Mathias Herzing, Jonas Häckner, Astri Muren, Eric Sjöberg et al).
   This multi-disciplinary research program is financed by the SEPA. It focuses on how compliance with environmental legislation is monitored by inspection authorities.
3. What is the optimal level of media competition for media performance? (with Lee B. Becker, C. Ann Hollifield, Eva-Maria Jacobsson and Tudor Vlad).
   The primary focus of the project is to analyse theoretically and empirically how media market concentration affects media performance in emerging media markets
4. Freedom of the press, economic development and market concentration, joint with Eva-Maria Jacobsson (Royal Institute of Technology (KTH)).
Jens Josephson
1. Responsible for the research project: "The effects of credit market competition on the corporate debt mix and the risk of contagion."
2. Investigating the role of credit rating agencies in the rating of structured products.
3. Investigating the role of credit rating agencies in the rating of sovereign debt.

3. “The impact of short-time work schemes on wage formation and unemployment”, (with Erik Grape)

Peter Langenius
1. Conducting monetary policy by managing private-sector expectations: A welfare analysis of central bank transparency

In this paper I use a New Keynesian monetary model in which the central bank has only an expectations channel through which it can implement monetary policy. In this extremely expectations augmented economy both the central bank’s and society’s welfare increase with higher central bank transparency.

2. A New Keynesian Phillips Curve on Time Scales

In this paper, I derive an optimal monetary policy rule for a New Keynesian Phillips curve on time scales. The rule is tested on data over Swedish forward interest rates.

3. Monetary Models on Time Scales (with Petr Stehlik)

In this paper we unify three seemingly distinct models of aggregate supply (AS) relations into one model on time scales. The analysis is restricted to a deterministic environment, but consents to an analysis of heterogeneous (non constant) time steps. It is shown that the admission of non constant time intervals significantly improves the ability of the model to explain US post-war data.

4. Information, Time and Transparency: A Trinity in a Monetary Policy Modelling

In this paper, central bank transparency is connected to the length of a period in the monetary policy model. Solving the central bank’s optimization problem one obtains an optimal period length which is shown to be related to the transparency level.
Heléne Lundqvist
1. The Emergence and Persistence of Right-Wing Extremism (with Matz Dahlberg and Kåre Vernby)
We explore the roots of right-wing extremism and how extreme right-wing values persist over time. The analysis is focused on the success of nazi-oriented parties in the 1930's in Sweden, and on the formation and growth of extreme right-wing parties in the turn of the 19th and 20th centuries.
2. Payoffs from National Politics
This project studies the monetary returns to national politics. Using a comprehensive dataset of Swedish politicians, I estimate the effect of being elected into the parliament on subsequent earnings as well as on other income measures.
3. On the Importance of Politicians' Characteristics for Politics and Public Policy (with Matz Dahlberg and Olle Folke)
We examine the role of individual characteristics of politicians for political success and for political decision-making.

Andreas Madestam
1. "A Theory of Prepayment" (with Rocco Macchiavello)
2. "A Theory of the Farm: Risk, Ownership Concentration, and Trust" (with Matthias Messner)
4. Inside the Production Function: the Effect of Financial Contracts on Growing Firms' Technology Use. Evidence from a Randomized Experiment in Uganda", with Selim Gulesci and Miri Stryjan
5. "Market Demand and Default Risk in Microfinance: The Effect of the Financial Crisis on Firms' Repayment Behavior" (with Patrick Behr and Simon Sonnekalb)
6. “The Long-Term and Intergenerational Effects of Fertility Policies” (with Emilia Simeonova)
7. "Workers of the World, Unite: The Economic Effects of Labor Day Demonstrations in Europe" (with David Yanagizawa-Drott)

Laurence Malafry
2. Electrification and Political Outcomes: Enlightened voters in Northern India, with Erik Prawitz
3. Environmental Tax Setting under Electoral Competition
4. Climate Change Policy and the Business Cycle

Kiflu G. Molla

1. Exchange Rate Pass-Through and Prices: Evidence from Sub-Saharan Africa with a Special focus on Ethiopia. (With Tseday J. Mekasha)

This paper examines the impact of an exchange rate shock on local currency import and consumer prices for a group of Sub-Saharan African countries with a particular focus on Ethiopia. Structural Vector Autoregressive model is estimated using long run identifying restrictions that are recovered from small open economy macro model.

Astri Muren

1. Inspections and Enforcement as Instruments for Enhancing Environmental Behaviour (with Mathias Herzing, Jonas Häckner, Astri Muren, Eric Sjöberg et al).

Multi-disciplinary research program financed by the Swedish Environmental Protection Agency (SEPA) focusing on the incentives of operators to comply with environmental law.

2. Efficient Environmental Inspections and Enforcement (with Mathias Herzing, Jonas Häckner, Astri Muren, Eric Sjöberg et al).

This multi-disciplinary research program is financed by the SEPA. It focuses on how compliance with environmental legislation is monitored by inspection authorities.

3. Gender and economic preferences in a large random and representative sample (with Anne Boschini, Anna Dreber, Eva Ranehill, Emma von Essen)

Mikael Priks

1. Reducing Crime by Targeting Prolific Offenders (with Olivier Marie and Steve Machin)

We investigate the impact of targeting the most prolific offenders on area crime rates. We empirically evaluate such schemes which were piloted in different areas of England and Wales between 2000 and 2004 as well as in Sweden from 2012. We find that the policies are successful in reducing burglaries.

2. Public Order and Private Payments? Policing of Events with Externalities (with Sten Nyberg)

Should organizers of events, such as sport games or concerts, share the costs of maintaining public order in connection to the events? We model how co-payments can address the under-provision of private effort to reduce unruly behavior. We also provide empirical evidence in line with the model.

Social pressure may affect the behavior of individuals. Soccer fields are attractive testing grounds but a drawback is that the number of spectators is endogenous. I
therefore use precipitation as an instrument for the number of spectators at Swedish soccer games. I find that organized home supporters manage to generate home wins.

**Claes-Henrik Siven**

1. Studies in crime and punishment

The standard analytical model of crime and punishment studies the behaviour of rational criminals, but neither the reactions of potential victims nor the interaction between the two groups. My project aims at contributing to the small literature which analyzes rational behavior on both sides and the resulting equilibrium solution.

**Peter Skogman Thoursie**

1. The Labor Market Effects of Parental Leave Policy. Together with professor Jim Albrecht (Georgetown University) and professor Susan Vroman (Georgetown University).

Two striking facts about Sweden motivate our interest in this topic. First, the gender gap in Sweden exhibits a pronounced glass ceiling effect. Second, Sweden has an extremely generous parental leave system. Women take more parental leave than men do, and the benefits received while on leave are closely tied to prior earnings. A natural question is whether there is some connection between these two facts. That is, does the Swedish parental leave system contribute to the glass ceiling effect? There are grounds to suspect such a connection. The project will perform two complementary ways to trace out labor market effects of Swedish parental leave policy. A first approach is purely empirical. Over time, both policy and social mores have changed regarding the proper roles of men and women at home and in the labor market. For example, the introduction of the “daddy month” (and the extension to a second month) has changed the average allocation of time of men and women between market work and childcare (Eriksson 2005). This change in average time allocation behavior over time should have implications for aggregate labor market outcomes — is the wage gap between men and women narrowing in better-paid jobs over time, are the career trajectories of women improving, etc? The second approach is more structural. The idea is to construct an equilibrium model of the labor market that highlights the effects of parental leave policy on wages, wage growth, and patterns of labor force participation by gender. Then, using appropriate micro data, one can estimate the model to identify the equilibrium effects of parental leave policy. Of course, the preliminary data analysis informs the construction of the model.

2. Effects of Supported Employment on Employment on Young Disability Pensioners?

Co-operation with Swedish Social Insurance Board. Using a social randomized experiment we evaluate whether Supported Employment works better than regular rehabilitation.

3. Does Privatization of Vocational Rehabilitation Improve Labour Market Opportunities?
Together with Lisa Jönsson. Using a social randomized experiment we evaluate whether private rehabilitation agents are more efficient than the public to get individual on long-term sickness leave back to work.

4. Culture differences and utilizations of social insurance systems.

With Martin Olsson and Per Pettersson-Lidbom. To what extent are social instance systems differently utilized depending on the individual’s culture?

Vanessa Sternbeck Fryxell

1. Theoretical Analysis of a Commitment Quotes Based Model (with Johannes Forss Sandahl)

The benchmark interest rate Libor was proved to have been manipulated by banks. The Swedish equivalent Stibor is set through what we call a committed quotes based procedure. We build a model of this procedure to analyze the incentives on the banks to submit truthful/false quotes.

2. Risks of bank refunding

I build a model focusing on a banking system where banks get funding from different markets, such as different foreign markets. I argue that when problems of refunding occurs these liquidity problems risk being spread through the system affecting banks that are not directly hit by these shocks.

Roine Vestman

1. “Analyzing Heterogeneous Responses to the Launch of a Mandatory Pension Plan: The Role of Cognitive and Non-cognitive Skills” (with Erik Lindqvist)

The existing literature on individuals’ investment behavior has documented large effects of cognitive skills (i.e. IQ) on investment outcomes. We use a unique Swedish data set that combines military test scores on cognitive and non-cognitive skills and detailed portfolio information to document the joint effects of both skills.

2. “The Optimal Combination of Mortgage Contracts and Bankruptcy Law” (with Anders Österling)

Inspired by the vast cross-country variation in personal bankruptcy legislation, we are studying its welfare implications. First, we investigate how different bankruptcy procedures affect households’ decision to default on their mortgage. Second, we investigate the interaction between mortgage innovation and bankruptcy procedure.

3. “Effects of Housing Wealth Shocks on Consumption and Investments: Evidence from a Natural Experiment” (with Ulf von Lilienfeld-Toal, Paolo Sodini, Stijn Van Nieuwerburgh)

The effect of changes in housing wealth on consumption and investment is central for policy makers. However, it is notoriously difficult to establish a credible causal effect. We use random variation in tenants’ attempts to purchase their apartments and form co-ops together with detailed household-level data to estimate the effect.
Jonas Vlachos
1. Sortering på arbets- och äktenskapsmarknaderna (with Erik Grönqvist, Erik Lindqvist, Christina Håkanson and Björn Öckert. Supported by Riksbankens Jubileumsfond and IFAU
2. Lär man sig mest på en fristående eller kommunal skola? (med Björn Hinnerich). Supported by IFAU
3. Grading biases. (with Sandra Black and Björn Tyrefors)
4. Education and Crime (with Hans Grönqvist, Caroline Hall and Olof Åslund).

Linnea Wickström Östervall
1. The effect of decentralized democratization on the well-being of citizens (with Charlotta Boström)
The aim is to study the effect of decentralized democratization on infant and child mortality and in a first step use a constitutional reform in India for identification. We will explore whether decentralized democratization reduces the probability of dying as a child, and evaluate some potential mechanisms.
2. Changes in temporary parental benefit and children’s antibiotics use (with Strama Stockholm)
3. Poverty, aspirations and the decision-making process (with Emma von Essen)
The effect of role models on educational aspirations and decisions regarding educational attainment is explored in the context of adult literacy programs in Bangladesh. The hypothesis is that role models may affect aspirations and decisions in this domain. The method used is randomized field experiment.
4. The effect of short term energy depletion on economic decision making (with Charlotta Boström and Emma von Essen)

Hans Wijkander
1. Dynamic Banking
The project aims at exploring banks’ responses to different types of financial markets regulation. Banks’ value maximizing choices of capital structure, the mix between equity capital and debt, such as retail- and wholesale deposits, and holdings of highly liquid assets as well as sizes of banks are explored given that there are financial market frictions that limit access to equity capital.
2. Bank Responses to Regulation
Main questions in the project are (i) What is optimal ratio of Tier 1 capital to risk weighted assets or optimal leverage ratio without financial markets regulation such as
the three Basle accords. (ii) How is banks liquidity transformation affected by capital adequacy regulation such as those in the Basle accords, given that bank assets cannot be reduced quickly without significant losses.
